
f6m_official_1v1_hier_selfplay_s1: all 666 logged episodes (3 threads x 3000 env steps = 9,000 steps each), ending at 5,994,000 steps (~6M budget, time cap).
No rolling mean is overlaid, so every late negative spike is a measured value: median episode reward -14.7 overall, -50.7 inside the band, -92.8 at the end.
Band = longest span whose 250k-step rolling median stays negative (2.5M-4.8M steps); raw line at alpha 0.85 instead of the usual 0.15 underlay because it is the only series here.
