
Same eight scaling runs and the same fixed 250,000-env-step rolling mean as fig2 (raw curves beneath). Seeds: 2v2=1, 3v3=2, 5v5=3, 10v10=2.
Line style = seed (solid 0, dashed 1, dash-dot 2). This is the plot shape that hid 10v10 before: its -18..+17 range is compressed by the 5v5 scale (-63..+53).
n_rollout_threads 4 / 8 / 8-10 / 20; 3 of 8 runs censored early (see labels).
Read trends in fig2 (per-panel y-scales); a taller curve here does NOT mean a better policy - each task defines its reward differently.
